

Playfield level tool © www.Flippers.be

This triangle has a slope of 6,5 degrees, the optimal playfield pitch for which pinball machines are designed.

Print page, glue to cardboard, cut out triangle.

1. Position triangle in center of playfield, tip facing towards top of playfield. It is important the triangle is perpendicular to the sides of the playfield.
2. Put bubble level on flat side of triangle.
3. Adjust legs until bubble level is straight. The playfield is now at 6,5 degrees.
